

Lifeline Phone, Tablets & SIM Cards

**Device availability depends on Lifeline representative's current inventory.*

May 2026

10:30am-2:30pm

**While supplies last or until capacity is reached.*

Carnegie Resource Center
3001 Oakes Avenue
Everett, WA 98201
(425) 434-4680

INCLUDES

- Unlimited Calls
- Unlimited Texts
- 4.5 GB of Data
- Unlimited International Calling to select Countries

QUALIFICATIONS

Must receive government Assistance such as:

- EBT Food Stamps
- Medicaid
- Pell Grant
- Reduced School Lunch
- And many more!

WHAT TO BRING

- Current state benefit award letter
- Valid ID
- Social Security Card

Tablets: \$80

Phones: \$20

SIM Cards: FREE

To complete the process, the National Verifier may need to request additional documents to confirm your eligibility. We recommend having any necessary documents ready to prevent any interruptions in your application. Delays in providing these documents will also delay the issuance of your device.

What does it mean to have a GSM Compatible Device?

What is GSM (Global System for Mobile communication)?

GSM (Global System for Mobile communication) is a digital mobile network that is widely used by mobile phone users in Europe and other parts of the world. GSM uses a variation of time division multiple access (TDMA) and is the most widely used of the three digital wireless telephony technologies: TDMA, GSM and code-division multiple access (CDMA).

What is GSM unlocked?

A GSM unlocked phone can connect with carriers on the Global System for Mobile Communications (GSM) standard, the primary technology for mobile networks globally. Ideal for international travelers and those who wish to easily switch carriers, these phones liberate users from the constraints of being tied to a single network and accept SIM cards from any GSM service provider.

What is the difference between GSM Unlocked and Factory Unlocked?

A factory unlocked phone represents ultimate flexibility, not bound to any specific carrier and compatible with both GSM and CDMA networks. GSM networks, widely used globally, allow easy switching of SIM cards among carriers. In contrast, CDMA (Code Division Multiple Access) carriers use a different technology that doesn't rely on SIM cards for network access. While a GSM unlocked phone excels on GSM networks, a factory unlocked device can seamlessly connect across both GSM and CDMA carriers, ensuring broader compatibility.

How can I tell if my phone is unlocked?

Below are the options available to determine whether your phone is unlocked:
If you're using a prepaid or pay-as-you-go plan, there's a good chance your phone is already unlocked. The FCC mandates that carriers unlock prepaid phones within a year of activation.

If you're using a prepaid or pay-as-you-go plan, there's a good chance your phone is already unlocked. The FCC mandates that carriers unlock prepaid phones within a year of activation.

Contact Your Wireless Carrier: Another reliable method is to directly contact your carrier. They can tell you whether your phone is unlocked and, if necessary, unlock it for you. You'll need to provide your IMEI number, which can be found by dialing **"*#06#"** on your phone. Alternatively, visiting your carrier's store or checking via their website or app are also viable options.

For Android Users:

- Go to Settings
- Tap on Connections (this might vary as Networks, Mobile Networks, or Cellular Networks depending on your device)
- Select Network Operators
- If a list of available networks shows up, your phone is likely unlocked. However, if only one or no network options are presented, your phone is probably locked.

For iPhone Users:

- Go to Settings
- Select Cellular
- If you see Cellular Data as an option under the Cellular menu, congratulations, your iPhone is unlocked. If the Cellular Data Network option isn't visible, then your device is still locked.

SIM Card Swap Test: A practical way to check your phone's status is by swapping SIM cards. Here's how:

- Power off your phone and locate the SIM card tray. You might need a SIM ejector tool or a paperclip to open it.
- Remove your current SIM card and replace it with one from a different carrier.
- Power your phone back on. If it requests a code to unlock the SIM, your phone is locked to your carrier. Conversely, if you can make calls and use the phone normally, it's unlocked.
